Important Notice

- Guide for personal and educational use only.
- Does not encourage piracy or illegal use of games.
- Do not turn off the console or remove the card while it is working.
- Back up your save files if they are important to you.

What you need

- PS Vita (any model).
- Wi-Fi configured and working.
- Battery at 50% or more.
- 10–20 minutes without rushing.

HENlo is designed for modern versions (3.65–3.74). If you have 3.60, there are other methods (HENkaku), but this guide focuses on the simplest and most current path.

Step 1 – Check console version

- 1 On the PS Vita main menu, look for the **Settings** icon (a grey briefcase).

- 2 Tap it once with your finger to open it. Wait 1–2 seconds.
- 3 Inside Settings, scroll down to **System** and tap **System Information**.
- 4 Look at the line that says **System Software**. Write down the number (e.g., 3.65, 3.68, 3.73...).

System Information

System Software: **3.73**

System Name: PS Vita

MAC Address: XX:XX:XX:XX:XX:XX

OK

If your version is 3.65 or higher, you can follow this guide with HENlo without any issues. Do not update the console if you are already on a compatible version.

Step 2 – Prepare connection and browser

- 1 Return to the main menu by pressing the **PS** button once.
- 2 Check that you are connected to your Wi-Fi:
 - Open **Settings** → **Network** → **Wi-Fi Settings**.
 - Verify that your network appears as “Connected”.
- 3 Close any open game or application (hold down the PS button and close bubbles if necessary).
- 4 On the main menu, look for the **Browser** icon (blue globe).
- 5 Tap it once to open it. Wait 1–3 seconds for it to load.

Do not turn off the console or press the PS button while you are in the middle of the steps with HENlo.

Step 3 – Open HENlo in the PS Vita browser

- 1 Inside the browser, tap the address bar at the top.
- 2 Clear whatever is written (if anything) and type exactly:
https://henlo.henkaku.xyz
- 3 Press the go/accept button (usually an arrow or “Go”).
- 4 Wait 5–20 seconds for the page to load. Do not touch anything.

HENlo

Ready to run exploit for your PS Vita.

Make sure your battery is charged.

START

You will see a big button called START to begin the process.

If the page doesn't load or gives an error, check the Wi-Fi and try again. If you try from a PC or mobile, it will never work: it only works from the PS Vita.

Step 4 – Execute the HENlo exploit

- 1 When you see the **START** button, tap it once. Do not press it multiple times.
- 2 After pressing START, do not touch the screen, do not press PS, do not close the browser.

HENlo – Process

Loading exploit...

This might take a while...

Installing payload...

These messages may appear for 5–30 seconds. This is normal.

- 3 If a warning message appears, press **Accept** or **OK**.

Notice

Allow this page to run code on the system?

(Example message)

Accept

- 4 When finished, the console may:
 - Restart itself.
 - Return to the menu.
 - Stay black for a few seconds.

All of this is normal.

If the screen stays black for more than 1–2 minutes, hold down the power button until it turns off, turn it back on, and repeat this step.

Step 5 – Check that VitaDeploy has been installed

- 1 When the console turns back on, wait for the main menu to appear.
- 2 Swipe the screen left or right if you have multiple pages of icons.
- 3 Look for a new icon called **VitaDeploy**.

Main Menu

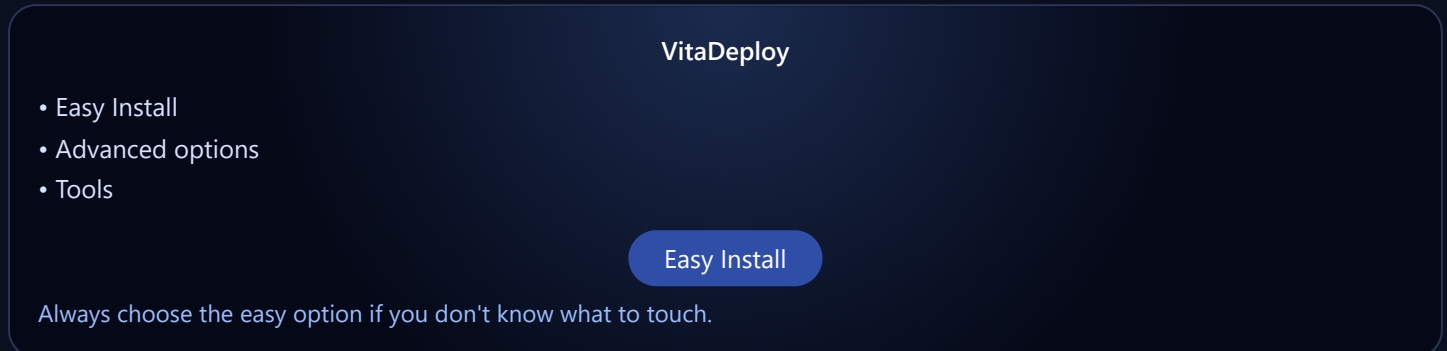

- Game A
- Game B
- **VitaDeploy** (new)
- Settings

- 4 If you see the VitaDeploy icon, it means HENlo worked correctly.

- 5 Tap the **VitaDeploy** icon to open it.

Step 6 – Use VitaDeploy (Easy Install)

- 1 When opening VitaDeploy for the first time, wait for the main menu to load.
- 2 Use the touch screen or buttons to select the **Easy Install** option.

- 3 Confirm if it asks for permission and let the process finish. Do not turn off the console or exit the app.
- 4 When finished, the console may return to the menu or show a success message. At that point, the hard part is done.

From here, your PS Vita is ready to follow other guides (memory, apps, etc.).

Typical errors and what to do

The HENlo page does not load

Page loading error

The page cannot be displayed.
Check your Internet connection.

Accept

- Close the browser (PS button → close the bubble).
- Check that Wi-Fi works (open google.com).
- Type again: **https://henlo.henkaku.xyz**
- If you are still on PC/mobile: it will never work.

Black screen after pressing START

Black screen

The console is not responding.
This may take a few seconds.

- Wait at least 60 seconds.

- If it doesn't change, hold the power button until it turns off.
- Turn it on and repeat from Step 3.

VitaDeploy does not appear after restart

Not installed

The VitaDeploy application was not found.
The exploit may not have completed.

- Repeat Step 3 (open HENlo).
- Repeat Step 4 (execute START).
- Do not press START multiple times.
- If it still fails, check NanospeedGamer's videos.

Memory card message

The memory card has been removed.

Do not remove the memory card while this system is in use.
If you do, the data may become corrupt.

This system will restart.

OK

- Do not touch the card during the process.
- Press **OK** and let it restart itself.
- Repeat the step you were on.

"Unsafe page" or certificate error

Security warning

The site's certificate is not valid.
Do you want to continue?

Yes

- On the PS Vita, it is normal.
- Press **Yes** or **Accept**.
- Continue with the process.

"Too many redirects" error

Redirect error

Too many redirects.
The page cannot be displayed.

- Open the browser.
- Menu → Settings → Clear cookies.
- Menu → Settings → Clear history.
- Close the browser and reopen it.
- Type the URL again.

“Not enough memory” error

Memory error

Not enough memory available.
Close applications.

- Close ALL open bubbles (PS button → close).
- Restart the console.
- Repeat from Step 2.
